JOINT PHOTOGRAPHIC INTELLIGENCE BRIEF

ARMY-NAVY-CIA

INSTALLATION: Communication Facility
LOCATION : Klyuchi, USSR
B. E. NUMBER: None
WAC NUMBER: 132

BRIEF NO.: JB-19-58
DATE : 6 August 1958
LAT. : 50° 19'N
LONG. : 160° 51'E

25X1D

REMARKS:

A high-frequency, long range communication facility has been identified at Klyuchi on the Kamchatka Peninsula. It consists of at least four double-end-pole rhombic antenna arrays, several of which are under construction. Moreover, it should be noted that considerable construction activity is evident in the area, and construction of several additional rhombic antennas is suggested by numerous anchor bases being emplaced.

The dimensions of two rhombics are almost identical to several rhombics located at a communication area in the Tyura Tam Missile Launching Complex.

25X1D

The facility is characterized by numerous structures and buildings in various stages of completion. A large control building with an associated cooling tower located within the site indicates that this is primarily a transmitting facility.
